JavaScript

Next.js

AWS

Flask

Django

Laravel

PROFILE

I'm a Software Developer with a lot of experience, I've worked for USA companies and I've also worked as a freelance for clients of Perú, Colombia, Chile and other Mexican states. I work in a lot of technologies like Laravel, CodeIgniter, Prado, Vue, React, Angular, Next.js, Ionic, Python, Java and a lot of more. I like to learn new technologies and new things in general. I know how to set up a VPS server from zero, I used Linux about 10 years until I started to use Mac OS. I know a little of shell too, even I know how to fix computer problems, but I don't like to much, a few years ago I started to work with AWS technologies too, and currently I'm working on my English skills.

EMPLOYMENT HISTORY

Coordinator at DIF Estatal, Campeche, México

March 2017

I came to the DIF to be part of the Technologies Department. I built all of the infrastructure for the human resources system, then I connected it to fingerprint devices to check attendance of employees, and then I developed a system of incidences that reduced 70% all the work of the human resources department, all of it was done manually. Also I developed their website and a surveys system, and other systems on the way too. In the other hand I gave maintenance to one system in Prado, obsolete, and I did it without documentation with vanilla PHP until the new system was released, developed by me of course. In fact I work now improving the performance and building Next.js applications consuming API REST of the human resources system and other systems in order to improve the system performance.

Senior FullStack Developer at iTrends, Campeche, México

February 2014 — February 2017

I started my development career in iTrends. I started developing in CodeIgniter, PHP, JavaScript. Some years later, I was building programs in Laravel, Ionic, Onsen UI, JavaScript, Vue.js, Node.js and Socket.io. As a part of the iTrends team we worked on local projects, national projects and even international projects. We built mobile apps, systems and websites from zero to cloud. After I left the company, I still work with them in freelance mode with technologies like Python, PHP, MongoDB, AWS Services like CodePipeline, CodeCommit, CodeBuild, Lambda, AWS Aurora and others.

EDUCATION

A2, Harmon Hall, Campeche, México

January 2019

I started to learn English in Harmon Hall, but by economic problems I left with A2 level. Actually, I'm studying again trying to improve my conversational English and of course my level.

Computer Systems Engineering, Instituto Tecnológico Nacional De México, Campeche, México

November 2010 — November 2015

CI/CD
Typescript
C#
.netcore
